## SELF-CLOSING FLOOD BARRIER (SCFB-570)

### IMMEDIATE PROTECTION FROM HARMFUL FLOODWATER

The Self-Closing Flood Barrier from PS Flood Barriers™ is one of the most progressive solutions to flooding on the market today. The unique design of this barrier provides an automatic response to sudden flooding conditions, protecting your facility from harmful floodwater as soon as it becomes an issue. Our Self-Closing Flood Barrier is stored in an underground recess, rising into position without human intervention, electricity or power the second flooding conditions occur. It is ideal for protecting walk doors, retaining walls, driveways, storefronts and loading docks/ramps during flash flood conditions.

#### IDEAL PROTECTION AGAINST FLASH FLOODS

- Passive flood protection – always in place to protect your facility without human intervention
- No form of electricity or power required for deployment
- Compression sealed (requires no compressed air for activation)
- Able to protect the full perimeter of a facility

#### ENGINEERED TO BE EFFECTIVE, SAFE AND CUSTOMIZABLE

- Available in mild steel or stainless steel construction
- Flush sill design eliminates tripping hazard
- Custom designed to fit your specific opening size
- Can be engineered for H-20-44 loading standards on roadways
