

SPILL CONTAINMENT BARRIERS

KEEP YOUR PEOPLE, YOUR FACILITY AND THE ENVIRONMENT SAFE BY KEEPING INDUSTRIAL SPILLS IN CHECK

Spill containment barriers from PS Flood Barriers™ are excellent for industrial applications where spills can become a hazard. Our Bottom Hinge Flood Barrier, HydroDefense® Flood Planks™ and EzDam® lift-out barriers are custom designed to prevent water, chemical spills or sprinkler releases from spreading throughout your facility or harming the environment.

BOTTOM HINGE BARRIER

- **Powerful Spill Protection** – The barrier is automatically triggered by a spill and quickly pivots up to protect your facility. It's always in place and can even be connected to your existing alarm system.
- **Convenient Storage** – This door self-stores within a floor surface, allowing personnel or vehicles to use the opening while the barrier is not deployed.

Self-Stores,
Pivots Open

Deployed Electronically,
Manually Or Passively

HYDRODEFENSE® FLOOD PLANKS™

- **Quick And Easy Installation** – Using a convenient latch system, 6" (model FP-530) or 8" (model FP-535) planks are stacked to create a liquid-resistant barrier that can be deployed by a single individual.
- **Versatile Operation** – The plank system can stay in place or be removed and stored if a walkway is needed for personnel or vehicle traffic.

Stackable Planks

Simple
Installation

EZDAM®

- **Quick and Easy Deployment** – Simply latch the barrier to the jambs in front of your opening and deploy in less than a minute.
- **Corrosion-Resistant Construction** – Made entirely of aluminum, it is built to last.
